Overview

Total Orders

98,666

Average Review Score

4.03

Avg Days Early/Late

11.11 days early

Average Freight Burden (%)

32.1%

Negative values mean orders arrived earlier than the estimated delivery date; positive values mean orders arrived late.

Operations & Reviews

Delivery Status vs Average Review Score

Caption: Delivery status patterns help explain review score differences.

Average Fulfillment Stage Delay

Caption: This chart compares average fulfillment-stage delays to show which stage contributes most to total timing.

Review Response Time by Sentiment Group

Caption: Review response speed is compared across sentiment groups.

Product Logistics

Freight Burden by Product Weight Band

Caption: Freight burden rises in certain weight bands and may affect satisfaction.

Basket Size Group: Review Score and Low-Review Rate

Caption: Low-review rate by basket size can be easier to interpret than average score alone.

Top Sellers by Average Freight Burden

Caption: Top freight-burden sellers are filtered by minimum sold item count.

Payment Consistency

Payment Difference Flags

These are reconciliation flags, not confirmed data errors. Olist orders may have multiple payments, vouchers, and payment behaviors that require order-level review.

Top Payment Difference Amounts

This chart highlights the largest order-level payment difference flags. These are review flags, not confirmed data errors.

Payment Method Distribution

This chart shows the distribution of payment methods in the dataset and provides context for interpreting payment reconciliation behavior.
